

# armour lyte

Scenography: rapid manufactured scenery & costumes

## The Client:

*Hampton Court Palace Flower Show '08.*

## The Project:

A small garden designed by the innovative company Metagardens, to demonstrate the possibilities of advanced 3D modelling software programmes and the process of digital fabrication, applied here to the 21st century urban plot.

## The Solution:

CNC cut recyclable polystyrene was coated in Armour-Lyte by approved fabricator Finline.

## The Result:

Metagardens' creation wowed the show and has now been relocated to Palmbrokers, serving as a stimulating yet relaxing spot for employees to have lunch! Hardcoating cut blocks is an increasingly accepted low cost architectural method for features and details. It is used on many residential and commercial developments being lightweight, durable and very convincing.

**[www.finline.uk.com](http://www.finline.uk.com)** Finline are Bristol's award winning lighting and solutions company and are one of the UK's leading event suppliers. They manufacture a wide variety of bespoke solutions in-house.

**[www.metagardens.co.uk](http://www.metagardens.co.uk)** Metagardens is an innovative design practice working at both built and experimental projects in garden design. They aim to go beyond the ordinary and conventional by utilising computational techniques and inventive manufacturing processes.
