

**The Client:** Austin Reed, Thirsk.

**Contractor:** McConnell Seamless Roofing

**The Problem:** The existing silicone system on a 6000m<sup>2</sup> roof had started to leak owing to general degradation and specific problems with bird attack.

**The Solution:** With proper preparation and priming, **ISOTHANE EMA** was proven to adhere well to the existing silicone layer. Local repairs were carried out and **ISOTHANE EMA** applied at a rate of 1 litre per square metre with reinforcement to upstands only. To provide additional protection the coating was blinded with slate granules while partially cured.

**The Outcome:**

- Exceptionally tough and hard wearing roofing solution
- Highly aesthetic finish
- Non - slip for safety
- No problems reported nearly five years on
